Esthetic Implants

*“Dedicated to
Excellence in
Cosmetic
Dentistry”*

- An implant/denture exam is completed to determine the health of some/all of your remaining teeth, tissues, bony ridges and supporting structures
- a very thorough examination of the occlusion (bite), face, neck, TMJ, and muscles may be completed
- a full series of photos are taken to aid in diagnosis, treatment planning and for use in computer imaging
- comprehensive treatment planning is performed for a specific area (each individual tooth and the surrounding tissues) and both jaws.
- a Panoramic Radiograph and a limited number of radiographs (x-rays) or a Sagittal x-ray may be taken for diagnostic, screening, and treatment planning purposes
- all clinical, radiographic, photographic and all other information gathered is reviewed, and used to provide you with specific implant and/or denture treatment plans as well as alternatives!
- family and friends are invited to come with you to the last ½ hour of this appointment. We will review our findings and discuss possible treatment alternatives.
- Within a few days, Dr. Paliani will design your potential new smile. A Complimentary Computer Simulation may be sent by e-mail or presented in person.
